Promoting Winter Driving Safety

A variety of winter weather conditions—including snow, slush, ice and sleet—can create hazards on the road. In fact, the U.S. Department of Transportation estimates that crashes stemming from these conditions result in 116,800 injuries and 1,300 fatalities each year.

As such, employees who must get behind the wheel during winter—whether it’s to make a delivery, transport materials or travel to the job site—should take additional precautions to stay safe. If your employees must drive in adverse conditions on the job this winter, provide them with these best practices:

- Allow yourself extra time to get to your destination.
- Slow down ahead of turns and curves, as this can help you prepare for icy spots.
- Drive at reduced speeds and increase your following distance behind the vehicle in front of you. This will allow for a buffer in case you start to lose control.
- Avoid overpowering your vehicle in deep snow.

These tips can make all the difference in helping employees reach their destinations safely.

Posting Annual OSHA Logs

The Occupational Safety and Health Administration (OSHA) requires employers to post the OSHA Log Summary ([OSHA Form 300A](#)) in a common area of the workplace—where notices are usually posted—so that all employees have access to the information.

The OSHA Log Summary must list the total number of work-related injuries and illnesses that affected employees during the 2021 calendar year. The information must be posted from Feb. 1 until April 30.

In addition, there is another deadline next month: Establishments in [certain industries](#) that are deemed to be high-risk and have between 20 and 249 employees are required to submit information from the 2021 OSHA Form 300A electronically by March 2.

Making Ladder Safety a Priority

March is National Ladder Safety Month, an annual initiative that encourages individuals to educate themselves on how to use ladders safely. If your employees utilize ladders to work from heights, it's crucial they understand proper safety protocols. Otherwise, such ladder use could result in serious injuries. In fact, 20% of annual fall-related workplace injuries stem from poor ladder usage, whereas more than 40% of fatal falls over the last decade have involved ladders. Don't let your employees become a statistic. Share the following ladder safety measures with your workforce:

- Make sure the weight that your ladder is supporting (i.e., you plus your materials) does not exceed its maximum load rating.
- Keep your body centered between the rails of the ladder at all times. Never overreach; instead, descend from the ladder while maintaining three points of contact and move it to a better position.
- Face the ladder when climbing up or down.

By taking these steps, your workers can stay safe on ladders and avoid potential injuries.

Helping Employees Combat Stress

April is National Stress Awareness Month. This event is intended to raise awareness of the consequences of excess stress and encourage individuals to seek appropriate strategies for mitigating and coping with stress.

A wide range of ramifications could result from your employees feeling overly stressed at work. Not only can such stress negatively impact employees' overall health and well-being, but it can also lead to additional workplace issues—such as lowered productivity levels, higher absenteeism and turnover rates, and a greater likelihood of on-the-job accidents. To help employees keep their stress levels under control, consider these best practices:

- Schedule routine check-ins with employees to discuss their stress levels.
- Encourage supervisors to monitor employees for signs of excess stress.
- Provide employees with stress relief opportunities—including regular breaks, wellness programs (e.g., mindfulness or meditation classes) and social activities.

For additional workplace stress management resources, [click here](#).

Ensuring Workplace Electrical Safety

The Electrical Safety Foundation International designates every May as National Electrical Safety Month. This campaign was created to educate employers and individuals about the various steps to reduce the risks of electrical-related fires, injuries, fatalities and property damage.

Work-related electrical incidents contribute to over 3,500 injuries every year, costing employers an annual total of more than \$1 million. These injuries may include burns, lacerations and electrical shocks—the latter of which can be fatal. Electrical incidents are especially prevalent among employees who frequently use electrical tools and equipment. To reduce hazards and keep your employees safe amid electrical tasks, give them these tips:

- Keep electrical tools and equipment on a regular inspection and maintenance schedule. Never use broken or damaged items.
- Wear the proper personal protective equipment for all electrical tasks.
- Ensure portable electrical tools are equipped with three-prong plugs to deter shocks.

Keeping Workers Hydrated in the Summer Rays

As summer temperatures rise, employees' water and electrolyte balances can get thrown off by dehydration throughout the workday. This condition—which is particularly common among outdoor workers—occurs when the body uses or loses more fluids than it takes in.

Dehydration is a serious complication that can cause fatigue, dizziness and confusion, all of which can compromise workplace safety. As such, keeping employees hydrated at work is essential. In addition to providing clean water on-site and scheduling routine refreshment breaks, instruct employees to follow these measures to stay properly hydrated on the job:

- **Track your consumption.** Use a notecard or mobile app to record how much water you drink each day.
- **Sip regularly.** Drink water throughout the day—even if you're not necessarily thirsty.
- **Be careful in the heat.** If warm conditions increase your need for water, make sure you have an ample supply, take breaks and get out of the heat if you feel weak, confused or have a dry mouth. These symptoms could indicate a heat-related illness.

For more information on keeping workers hydrated, [click here](#).

Protecting Employees From Sunburn

When working outdoors—especially in the summertime—employees may unknowingly expose themselves to harmful ultraviolet (UV) rays. Even on a cloudy day, outdoor workers can capture up to 80% of UV rays. On a hot, sunny day, UV rays can be even more intense—potentially causing exposed workers to experience a red, painful skin reaction known as sunburn.

While sunburn symptoms are usually temporary, such a burn can cause long-lasting damage to the skin’s DNA and increase the risk of skin cancer. Nevertheless, there are steps that your employees can take to prevent sunburns while working outside, including:

- Keeping away from direct sunlight as much as possible
- Applying sunblock that’s at least SPF 30 before sun exposure and reapplying it liberally every two hours throughout the day
- Wearing appropriate clothing (e.g., long sleeves, hats or sunglasses) to safeguard the skin and eyes from UV rays

[Click here](#) for more information on sun safety.

Celebrating Safe + Sound Week Within Your Workplace

Safe + Sound Week is an annual campaign conducted by OSHA and other safety organizations. It will take place from Aug. 8-14 this year. Each year, this event aims to recognize the successes of workplace safety and health programs across the country and provide additional resources to help organizations kick-start or improve upon their occupational safety and health initiatives.

As Safe + Sound Week approaches, your organization can participate in the annual campaign by taking the following three steps:

1. **Sign up.** Let OSHA know you plan to participate by registering [here](#).
2. **Find activities and events.** Once your organization has registered for the campaign, be sure to search for [activities and events](#) to promote in your workplace and community.
3. **Celebrate your participation.** When the campaign ends and your organization has completed all activities and events, you can recognize your workplace's participation with a [certificate](#).

Recognizing National Suicide Prevention Awareness Month

The National Alliance on Mental Illness (NAMI) commemorates September as National Suicide Prevention Month. This annual campaign's goals are to destigmatize the topic of suicide, share valuable prevention resources and give hope to those who have been affected by suicide. According to NAMI, suicide is one of the top causes of death across all age groups in the United States. Further, the country's overall suicide rate has increased by 35% in the past two decades. This month (and every month), consider implementing these practices to foster a supportive workplace culture that promotes suicide prevention:

- Encourage an open dialogue surrounding work-related stressors and mental health. This way, employees are more likely to feel comfortable voicing their struggles.
- Provide employees with plenty of suicide prevention information (e.g., presentations, pamphlets and online guidance) and support services within the workplace.
- Inform employees of crisis resources, such as the suicide prevention lifeline (1-800-273 TALK [8255]) and the NAMI text line (text NAMI to 741-741).

For more information on suicide prevention in the workplace, [click here](#).

Safeguarding Employees From Eye Injuries

October is Eye Injury Prevention Month. During this annual event, individuals are encouraged to educate themselves on the ramifications of eye injuries and learn ways to prevent such injuries. According to the American Academy of Ophthalmology, an estimated 2.5 million people experience eye injuries every year—injuries that have the potential to result in partial or total vision loss.

Eye injuries can impact employees across industry lines. While every workplace is different, common causes of occupational eye injuries include flying objects, chemical splashes, harmful radiation and airborne debris or other particles (e.g., dust). To protect your employees from eye injuries, make sure they follow these safety measures:

- Select safety glasses or goggles that are appropriate for the job and your facial features.
- Utilize glasses or goggles that are properly ventilated for the work you are performing.
- Keep safety glasses and goggles clean. Scratches and dirt can reduce vision, cause glare and contribute to accidents.

[Click here](#) for further resources on occupational eye safety.

November 2022

Provided by: TIG Advisors

Mitigating Lung Cancer Risks Within the Workplace

November is Lung Cancer Awareness Month. This annual event is intended to educate the public on lung cancer risk factors, treatment and prevention. According to the Centers for Disease Control and Prevention, more people die from lung cancer than any other cancer. While personal factors—such as smoking—can increase lung cancer risks, certain work-related exposures can also make employees more vulnerable to lung conditions (including cancer). Specifically, long-term exposure to respiratory irritants (e.g., dust, gases, dirt, asbestos and hazardous chemicals) can cause workers to develop lung conditions over time. If your employees are exposed to irritants on the job, take these steps to protect their lungs:

- Educate workers on the risks and severity of occupational lung conditions.
- Provide employees with all necessary personal protective equipment (PPE) when working near respiratory irritants and train them on the proper use of this PPE.
- Consider having a health and safety expert routinely assess your workplace for any exposures that may contribute to occupational lung conditions.

For more information on occupational lung conditions, [click here](#).

Preventing Frostbite Concerns During Winter

Working outdoors in the cold winter weather can heighten employees' risk of experiencing various complications, such as frostbite. This condition is caused by freezing the skin and its underlying tissue. Frostbite can lead to stinging, numbness, stiffness and blistering in the affected areas (usually the fingers, toes or face). In severe cases, this condition can result in permanent tissue damage. With this in mind, it's vital to educate your employees on the following safety measures if they must work in frigid temperatures during the winter:

- Wear several breathable yet protective layers of clothing while you work. In addition to these layers, bundle up with a warm hat, scarf, mittens, socks and waterproof boots.
- Eat healthy foods rich in carbohydrates and protein prior to working in the cold to help fuel your body and keep warm. Stay hydrated by drinking plenty of water.
- Keep your body warm and your blood flowing while working in the cold by staying as active as possible. However, be sure to avoid overexerting yourself.

If employees show signs of frostbite (e.g., pale skin, prickling and numbness), they should be moved indoors. If their condition doesn't improve, they should receive medical attention.
